Last position Researcher in Evolutionary Robotics (until November 2026)

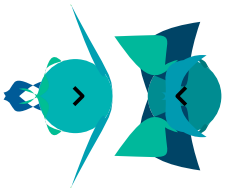

Highlights

Research *Artificial Life: Morphology, Cognition & Interaction*

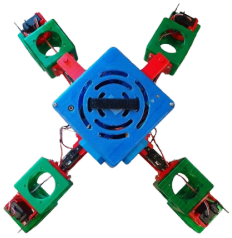

Main fields

Artificial Neural Networks

Morphogenetic Engineering

Evolutionary Robotics

Output
3 journal articles (*Artificial Life, Frontiers, JOSS*)
7 international conference articles (*ALife, IEEE ALife, EvoAPP...*)
7 international workshops short papers (*ALife, ECAL, AAAI*)
Scientific software: ABrain, AMaze, Revolve2, SHARPIE

Positions

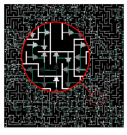

Postdoctoral
Oct. 2026
Nov. 2022
Computer Science / Evolutionary Robotics
"NeuroEvolution and Reinforcement Learning for Embodied Robots"
Computational Intelligence Group - Vrije Universiteit Amsterdam, The Netherlands
Supervisor: Dr. A. Yaman (a.yaman@vu.nl)
Collaborators: Dr. A. Kononova (a.kononova@liacs.leidenuniv.nl)

Postdoctoral
Oct. 2022
Jul. 2020
Computer Science / Artificial Intelligence
"Emergent cognitive architectures in virtual embodied robots"
REVA Team, IRIT - Toulouse I University, France
Supervisors: Pr. Y. Duthen (yves.duthen@irit.fr)
Pr. S. Cussat-Blanc (sylvain.cussat-blanc@irit.fr)

PhD
Jul. 2020
Sep. 2016
Computer Science / Artificial Life
"Environment-driven speciation: long term interactions in artificial plant communities"
REVA Team, IRIT - Toulouse I University, France
Supervisors: Pr. Y. Duthen (yves.duthen@irit.fr)
Pr. S. Cussat-Blanc (sylvain.cussat-blanc@irit.fr)

Teaching	9 years (∼800 hours)
Computer Science	Research thesis supervision (8 BSc, 3 MSc, full list) Learning Machines, NeuroEvolution Programming languages: Python, C, R Algorithms, Data Structures, Information theory Programming projects
Generalists	Data Science tools and languages Database modeling, SQL
Skills	
Programming	Fluent: C++, Bash, Python, LaTeX Working Knowledge: C, Java, R, VB, VBA, JavaScript Frameworks: (Py)Qt, MuJoCo
Technical	Evolutionary Algorithms, Machine Learning, Multi-Agents Systems, High-Performance Computing
Languages	French (native), English (professional command)

Research

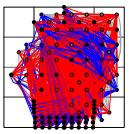

Synopsis	My main interests revolve around autonomous artificial life forms: from the design of efficient morphologies to the emergence of high-level control schemes and the evolutionary constraints that favor both. Recently I am mostly focused on Artificial Neural Networks (ANN) through NeuroEvolution and Reinforcement Learning, notably in the context of Interactive Evolutionary Robotics.
Evolutionary Robotics	Optimising both morphologies and controllers in robots that can perform a variety of tasks.
	[1] Generic control Evolving morphologies and controllers for multi-task zero-shot transfer. **Software:** Apets/Generic
	[7] Frugality Determining parameter-efficient controllers for locomotion tasks, from pure NeuroEvolution to Reinforcement Learning. **Software:** Apets/Control
Reinforcement Learning	Complementing Neuro-Evolutionary approaches with Reinforcement-based learning for more robust agents.
	[2, 3] AMaze Benchmark generator for lightweight sighted agents. Meant as a fast prototyping platform for Reinforcement Learning and NeuroEvolutionary algorithms. **Software:** AMaze

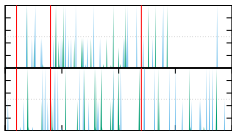

[15, 14] SHARPIE
Collaborative Hybrid Intelligence project aiming to provide the new standard for interactive experiments in Reinforcement Learning settings.
Software: SHARPIE

Artificial Neural Networks

Studying the emergence of various "cognitive" capabilities in virtual robots, controlled by a spontaneously differentiated neural network, in response to biologically plausible stimuli.

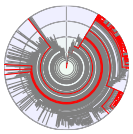

[10, 4, 9] Virtual fMRI
Extracting stimulus-specific regions of an ANN by applying a virtual equivalent to functional Magnetic Resonance Imaging (fMRI) and building high-level cognitive maps.
Software: ABrain

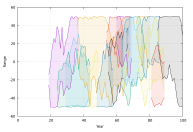

[18, 17] Communication
Exploring the mechanisms leading to emergent communication, how it becomes structured and its neural implementation.

Species Dynamics

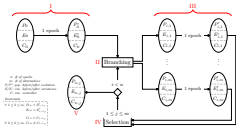

Promoting complex evolutionary trajectories and extracting species-level information from individual reproductions.

[21, 19] Phylogenetics
Automatically transforming genealogic trees into phylogenetic abstraction to access the emergent species-level dynamics.
Software: APOGeT(Automated Phylogeny Over Geological Timescales)

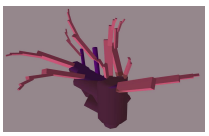

[13] Speciation
Application of a bio-inspired reproduction operator (Bail-Out Crossover) capable of spontaneously generating species barriers thereby allowing for emergent speciation.

[11, 28] Evolutionary algorithms
Introduced a novel paradigm, EDEnS (Environment-Driven Evolutionary Selection), relying on the indirect controlling of whole populations' evolutionary trajectories through an evolvable environmental controller.

Morphogenetic Engineering

Developing functional morphology in response to environmental constraints and evolutionary pressures.

[20, 11, 12, 21] Developmental morphologies
Production of mature, functional virtual plants from a single cell/structure using various genetic encodings (rules-based, L-Systems, Graphtals) in response to environmental constraints.

[4] Virtual robots
Use of genetically parameterized cubic bézier curves to control both static and mobile structures on the perimeter of virtual circular robots.
Software: Splinoids **Videos:** on Vimeo

Expertise

Evolutionary Algorithms	• Environment-Driven Evolutionary Selection (EDEnS) • Multi-objective Optimisation • High Performance Computing (HPC), Co-evolution, Novelty
Machine Learning	• Artificial Neural Networks (ANN, CNN, RNN) • Composite Pattern-Producing Networks (CPPN) • Cartesian Genetic Programming (CGP) • Genetic Regulatory Networks (GRN) • Hidden Markov Models (HMM) • Stable baselines 3, PyTorch
Physics simulators	• Approximate: Bullet3, Box2D • Exact: MuJoCo

Teachings

Postdoc	Vrije Universiteit Amsterdam	
Feb. 2026	*Fully international*	
Jun. 2023	• NeuroEvolution (lecture)	
	• Learning Machines (projects)	*45h*
	• Master and Bachelor thesis supervision (list)	*∼200h*
Course management	Toulouse I University & Toulouse III University, France	
	• Computer Science projects	*72h*
Jul. 2022	*Multi-Agent Systems, Complex Systems, Simulation*	
Jan. 2021	• R programming	*67.5h*
	English lectures	
	• Information theory	*22.5h*
	• Servers and contents	*18.75h*
Teaching fellow	Toulouse I University & Toulouse III University, France	
Jul. 2020	• Statistical software (R & Python)	*36h*
Jan. 2017	• Algorithms (with project-based evaluation)	*60h*
	• Excel & VBA	*60h*
	• Modeling in databases	*21h*
Practical work supervisor	Toulouse III University, France	
	• Software projects	*69.2h*
Jun. 2021	• Data structures	*18.8h*
Sep. 2016	• C Programming	*36h*
	• Python	*8h*

Outreach

Reviewer	• Artificial Life (ALife) program comitee member
Since 2023	• IEEE Transactions on Evolutionary Computation
	• Journal of Open Source Software reviewer
	• PPSN 2026

EduMix Aspi-Friendly 2021 — Initiated a project for the self-monitoring of well-being in students with autistic disorders alongside a heterogeneous team of neuro-(a)typical and various profiles (faculty, designers, developers ...).

Internships

Morphogenetic Engineering Jan. - Jul. 2016 — Toulouse Research Institute on Computer Science (IRIT), France
"Rule-based artificial embryogenesis in a complex 3D environment"
Deployed rule-based genomes on the MecaCell platform to study artificial plant growth and cell specialization.
Contact: Pr. Y. Duthen (yves.duthen@irit.fr)

Machine Learning Apr. - Jul. 2015 — IRIT, *"Comparison of different evolutionary approaches, an application to the GECCO 2015 challenge"*
Performed a performance comparison (accuracy, efficiency) between Artificial Neural and Genetic Regulatory Networks on the 2015 GECCO temperature prediction challenge data.
Contact: Pr. H. Luga (herve.luga@irit.fr)

Machine Learning May - Jul. 2014 — IRIT, *"An architecture for automated bird discrimination"*
Applied Hidden Markov Models to the BirdClef2014 challenge on the identification of specific bird species in a corpus of thousands of recordings.
Contact: Pr. J. Farinas (jerome.farinas@irit.fr)

Education

PhD Jul. 2020 Sep. 2016 — Toulouse I University, France
Defended the 15th of July 2020
Thesis title: *"Environment-driven speciation: long term interactions in artificial plant communities"*
Investigated how complexification of artificial creatures could be further enhanced through the indirect control provided by a co-evolved, highly dynamical environment.
Rapporteurs: Pr. P. Collet & DoR. F. Vico
Contact: Pr. Y. Duthen (yves.duthen@irit.fr)

Master 2014 - 2016 — Toulouse III University, France (*with honours*)
Artificial Intelligence: mathematical & symbolic models, training methods

Bachelor 2011 - 2014 — Toulouse III University (*with distinction*)
Computer Science: networks, programming, systems, mathematics

Scholarships and Fellowships

2023 - 2026 ∼ 200K € — Postdoctoral funding from the Hybrid Intelligence Centre (Netherlands)

2016 - 2019 70K €	PhD Fellowship from the French Minister of Higher Education and Research (MESR)
2015 10K €	Master Scholarship from the International Mathematics and Computer Science Center (LabEx CIMI, Toulouse)
2014 - 2015 3.6K €	Merit Scholarship from the Regional Student Welfare Office (CROUS, Toulouse)
